HIREL STAG Vers. 2.1 EN

## Relay module

for ESR21, ESR31, UVR61-3, UVR63 and UVR63H

The controls can be upgraded with the relay module HIREL-STAG.

Dependent on the control type, the relay module is available for various applications. Activation of the relay module is described in the respective valid controller operating manual.

## Fitting in the unit socket ESr21, ESR31

## Fitting in the unit socket UVR61-3, UVR63 and UVR63H

The relay module is connected to the sensor earth and a control output in accordance with the above images. The 4-pole earth strip is enclosed for the ESR31 controller.

The closer contact is potential-free.

If used in the mains voltage range, the relay must not be used in the controller sensor range rather must be installed in its own suitable housing.

Max. switching capacity: 230V/1A

If a **high efficiency pump** is to be switched with the auxiliary relay, due to the lower switching capacity, an **external** relay with sufficient switching capacity must be interposed.

We reserve the right to make technical changes.
